SUMMARY

Computer and Robotics Engineering graduate from Bangkok University with hands-on internship experience in Web Application Development. Contributed across the full software development lifecycle while collaborating with cross-functional teams to deliver features and resolve technical challenges. Passionate about building reliable, high-quality software with a systems-thinking mindset and committed to continuous learning to create real value for users and the organization.

SKILLS

Programming Languages: JavaScript, TypeScript, SQL, Python, C, C++

Frontend Development: React, Angular, Vue.js, Next.js, React Native, HTML, CSS, Tailwind CSS, Bootstrap, Three.js

Backend/Database: Node.js, Express.js, RESTful APIs, MySQL, MongoDB, Supabase

Tools: Git, Postman, Swagger, Figma, Storybook, Android Studio

Cloud/DevOps: AWS (EC2), Docker

EDUCATION

Bangkok University

Bachelor of Engineering | Major: Computer and Robotics Engineering | Cumulative GPA: 3.30/4.00

PROFESSIONAL EXPERIENCE

June 2024 - November 2024

Full Stack Developer Internship CODESMASH (Pathum Thani, TH)

Developed and delivered web applications using React, TypeScript, and MySQL as part of a professional development team.

Accomplishments:

- Built 4 reusable UI components (Sidebar, Menu, Pop-up, Carousel) with Storybook in 4 weeks, reducing development time for subsequent features.
- Developed a Matching Card Game in React & TypeScript in 1 week, completing the assigned task within the given deadline.
- Collaborated with a 3-person team on Open House BU, designing a 13-table MySQL database and integrating 10+ API endpoints via AJAX, delivering on schedule and supporting 30+ users on event day.

PROJECTS

Portfolio website: [portfolio-krittiyane](#) (for additional information and projects)

AI-Powered Tourist Attraction Recommendation App Based on User Mood: github.com/Nextrip

“Just answer how you feel, and we'll find the perfect place for you.”

- Built and integrated a conversational AI recommendation system using OpenAI GPT-4o, preprocessing 5 user input parameters into structured prompts to generate personalized travel suggestions across 5 destinations.
- Designed with user-friendliness in mind, it translates casual preferences on mood, budget, and distance into structured AI queries through a multi-step prompt system.
- Enhanced recommendation quality by combining GPT-4o with the Wikimedia API for dynamic place image retrieval via automated Thai-to-English translation.
- Validated with 56 users across 50 test cases, achieving 4.1/5 in relevance and usability, with findings suggesting AI response latency of 20–40 seconds as the primary area for further development.

MERN Stack To-Do List (CRUD System): github.com/Nextrip

“Create, manage, and delete tasks with data that stays even after you close the tab.”

- Architected a 3-tier MERN system (React/Vite, Node.js/Express, MongoDB) with 4 RESTful endpoints (GET, POST, PATCH, DELETE), achieving 100% endpoint coverage across all CRUD operations within a 3-day solo development cycle.
- Integrated MongoDB Atlas for cloud-based storage, enabling full data persistence across sessions with real-time task updates via Axios, ensuring zero data loss on page refresh.
- Styled with Tailwind CSS to deliver a responsive, production-ready UI across the full stack.
